CoA LAB Exercise

Dated: 14 December 2010

TASKS

1. **Write a program that input a character from user. If character is in lowercase, the program will convert it to uppercase and will display it on console after conversion.**

    Hint: The ASCII codes for lowercase letters (a-z) are 97-122. In order to convert a lowercase letter to uppercase letter, just subtract 32 from its ASCII code.

2. **Write a program that inputs a string of up to 10 characters from the console and then displays the string in reverse order.**
